

# Shield of Excellence: Securing & Simplifying the Business With Microsoft E5

In the new era of cybersecurity, Microsoft® E5 goes beyond conventional measures. Explore the business benefits of the E5 suite and how Insight is helping clients make the transition seamless — and strategic — for greater ROI.

## Experience a single-platform advantage.

Operational simplicity unlocks a host of business benefits. Single-platform security management with E5 becomes the linchpin — helping streamline operations by cutting down complexity across security tasks.

## Integrate across your security ecosystem.

Whether it's Outlook®, Teams®, Power BI® Pro, Defender Suites or everything in between, E5 integrates with your key productivity tools for a truly unified experience.

**The result:** Employees work seamlessly across tools while maintaining a high level of security and compliance.

## Copilot for Microsoft 365: How does E5 support your adoption?

“When it comes to your larger Copilot adoption strategy, data loss prevention with E5 becomes key. Additionally, Purview supports content management in ways no other platform can. All of this ensures your Copilot responses are specific only to what users have access to. If you have these solutions implemented correctly, you won't have data leakage across other tool sets or users.”
