Microsoft Fabric

End-to-end analytics

The modern data challenge

Today's companies are experiencing unprecedented surges in data creation — outpacing their ability to manage it. And as leaders seek to harness the power of AI, the quality of the data and analytics may be holding them back from realising true value.

Now, companies are seeking ways to better optimise their existing data environment to:

- Cut costs & drive revenue.
- Seamlessly integrate disparate data.
- Influence better decision-making.
- Boost enterprisewide security.

So, how can organisations effectively scale data and analytics and start witnessing real impact across their teams?

One platform. One consistent experience.

Microsoft® Fabric is a modern data analytics platform designed to unify and simplify your business data environment.

This platform integrates data from multiple sources, pulling it into a cohesive analytics framework with built-in governance, security and compliance at every level. The unified data is stored in OneLake™ via open format and used to train machine learning models and facilitate everyday AI functionality.

Plus, Microsoft Fabric empowers teams across the business with easy-to-use tools that are both familiar and intuitive. With Microsoft Fabric, organisations can break down silos and enhance collaboration among technical and nontechnical users alike.

Benefits

- Real-time analytics
- Lake-centric and open
- Role-specific tools
- Governance and security
- Simplified user collaboration experience
