

Solution Brief

Insight Managed Detection and Response

Insight's Managed Detection and Response (MDR) is an advanced cybersecurity service that manages threat detection, response, and remediation/recovery. It removes both the need for expensive in-house cybersecurity expertise and the issues caused by fragmented, multi-vendor security.

Providing 24/7 centralised security visibility and control of threats across your whole on-premise and cloud estate, it unlocks the potential of threat intelligence and through proactive threat hunting protects your data and assets around the clock – even from elusive advanced persistent threats (APTs).

Why Insight

Insight provides a true 24x7x365 service delivered by skilled security analysts and security operations experts.

Simple, scalable pricing reduces the total cost of ownership of cybersecurity while our years of experience and partnerships with global technology leaders give you peace of mind that your cloud and on-premise estate is cost-effectively and efficiently protected from vulnerabilities, threats and attacks.

Business Challenge

As security threats become more sophisticated and with APTs remaining undetected by many traditional cybersecurity solutions or going undetected for a significant period of time, the cost and impact to organisations are significant.

The key to successful cybersecurity is to maximise real-time visibility, detection and response to threats and at the same time minimise the impact of vulnerabilities, configuration issues, and attacks. But building an effective cybersecurity program in-house and internally filling specialised security roles such as incident response, cloud security, and malware-data analysis can be expensive and time-consuming.

Our Solution

Insight's MDR enables you to quickly achieve a high level of cybersecurity maturity through the rapid deployment of a full security program. The service offers 24/7 estate-wide threat ingestion, analysis and detection, and industry leading incident remediation timescales.

Security information and event management (SIEM) capabilities provide holistic centralised control and a consolidated security view across your estate, and we combine advanced analytics, threat intelligence and human expertise to provide unrivalled incident investigation and response.

Events are automatically classified based on impact and urgency, incident records are automatically logged and ingested information is organised to deliver meaningful and actionable data for analysis and reports in a single dashboard, and to ensure you meet compliance regulations.

Benefits

- Alleviate security skills constraints
- Enhance security with proactive advanced threat identification
- Reduce SIEM operational costs
- Fully respond to and recover from cybersecurity incidents with 24x7x365 support from industry leading expertise
- Free-up valuable in-house resources for strategic projects
- Global Threat Landscape scanning via an advanced SOC
