

Software Lifecycle Services (SLS)

Helping clients solve their licensing challenges.

Most assets are managed closely to ensure value for money. Yet despite software typically consuming a quarter of IT budgets, it is often not managed in the same way, which can result in:

- Software over-procurement and wastage
- More frequent and intense software auditing
- Multiple software publishers and maintenance agreements
- Pressure to justify the cost of internal investment

Our Software Lifecycle Services (SLS) are designed to help you with all elements of your Software Asset Management, improving business performance whilst ensuring you maximise software investment.

You can outsource as much, or as little of your software lifecycle management, we work around your needs.

Benefits

- Gain meaningful reporting and insights from your disparate data.
- Eliminate shelf ware by only buying what you need to create cost efficiencies.
- Recycle software from non-use, to where it is needed.
- Identify non-compliance and address it.

We offer five services that cover all aspects of managing software:

1. Licensing Intelligence Centre

Providing on-demand software licensing expertise as an extension to your service desk.

2. Environment and Tooling

Giving clarity on the IT assets within your organisation and/or managing associated tooling.

3. Purchasing and Entitlement

Efficiently managing and advising on software procurement decisions and drive fulfilment actions.

4. Governance and Compliance

Managing risks and change, offering guidance on best practice, and providing insightful stakeholder reporting.

5. Lean Licensing

Optimising your software consumption and procurement to its ideal running state.

Each service can be consumed independently or delivered as one programme to help you through your full software lifecycle journey.
